

1. Users Schema

```
import { defineType, defineField } from 'sanity';

export default defineType({
  name: 'user',
  type: 'document',
  title: 'User',
  fields: [
    defineField({
      name: 'user_id',
      type: 'string',
      title: 'User ID',
      description: 'Unique identifier for each user (UUID).',
    }),
    defineField({
      name: 'name',
      type: 'string',
      title: 'Full Name',
      description: 'Full name of the user.',
    }),
    defineField({
      name: 'email',
      type: 'string',
      title: 'Email',
```

```
    description: 'Email address for communication and login.',
  }},
  defineField({
    name: 'password',
    type: 'string',
    title: 'Password',
    description: 'Encrypted password for security.',
  }},
  defineField({
    name: 'role',
    type: 'string',
    title: 'Role',
    description: 'Role of the user (Buyer, Seller, Admin).',
    options: {
      list: ['Buyer', 'Seller', 'Admin'],
    },
  }},
  defineField({
    name: 'phone',
    type: 'string',
    title: 'Phone',
    description: 'Contact number of the user.',
  }},
  defineField({
```

```
    name: 'address',
    type: 'string',
    title: 'Address',
    description: 'Optional address for buyers.',
  }},
  defineField({
    name: 'verification_status',
    type: 'string',
    title: 'Verification Status',
    description: 'Seller verification status (Pending/Verified).',
    options: {
      list: ['Pending', 'Verified'],
    },
  }},
],
});
```
